Construction Progress

Two months since the first issue of this Newsletter, project contractor, Al Naboodah pushed construction in Sienna Lakes by increasing the number of people on site from 500 a day to over 700. This resulted in completion of 63 basement walls with over 40 completed with concrete slabs, primed, waterproofed and works going above the ground.

Super structure works are ongoing in most villas and columns can be seen sprouting around the construction site. Some villas have already reached the first floor level. Others have gone further, even reaching the roof.

DEWA connection has been confirmed by Jumeirah Golf Estates through their infrastructure consultants Mott MacDonald Ltd. This is a significant development for the project.

Solid structures with no compromises and no shortcuts are typical qualities that come with beauty in Sienna Lakes villas. Your future home!

Partners & Suppliers

Miele Appliances

Using integrated appliances from Miele, the only premium brand in the household appliance industry represented on all five continents, Sienna Lakes kitchens are individually designed to the highest standards of both design and functionality.

Miele appliances such as built-in oven, dishwasher, cooker hood island, electric grill, microwave with grill, built-in fridge, built-in freezer, coffee maker, washing machine, condensation dryer and drink cooler would make your life at Sienna Lakes simply perfect.

Bang & Olufsen

Bang & Olufsen, one of the world's finest names within the audio visual industry, is renowned for combining state-of-the-art performance with intelligent design and timeless craftsmanship. That is why we chose Bang & Olufsen to equip all Sienna Lakes homes with audio-visual installations ensuring the truest possible performances you could ask for. Prepare to be entertained.

Development at Jumeirah Golf Estates

Fire Course

The Fire Course measures 7,453 yards from the Championship tees and is the classic ‘risk and reward’ golfing experience for players of all abilities.

With only limited areas of peripheral landscaping left to do, and construction on drainage, bunkers and small sections of cart path continuing into May, the Fire course will be done shortly thereafter.

Norman Clubhouse

The structural steel roof over the impressive facility is now complete and roofing works are progressing rapidly, with a third of the room area now tiled. Inside, block-work on the main and lower levels of the spa area is nearing its finishing point and plastering work in the member and non-member areas is advancing well. From many areas of both courses the Norman Clubhouse is already looking spectacular.
